

Build Roadmap

Gouder Haithem — gouderhaithem.com · Prepared 27 June 2026 · Next.js · Postgres/Prisma · Cloudinary · Gemini

The public site (projects, blog, services + detail pages) is live and DB-backed with a graceful mock fallback. The admin panel has auth, Cloudinary uploads (auto-resized to WebP), and a Gemini writing assistant. This document lists what to add next, ranked by value for a lead-generating portfolio.

TIER 1

Correctness & security gaps

do these first

ISR revalidation on publish

Verify that saving/publishing in the admin actually updates the public pages. If the admin actions don't call `revalidatePath('/blog')` etc. (or pages lack `export const revalidate`), edits won't appear until a redeploy. Most likely real bug in the current setup.

LIKELY BUGHIGH IMPACTLOW EFFORT

Login rate limiting

The chatbot route is throttled, but the admin login isn't. A public `/admin/login` with password auth is a brute-force target — add per-IP throttling plus a short lockout. A light limit on the AI-assist action protects Gemini quota too.

SECURITYHIGH IMPACTLOW EFFORT

A starter test suite

Currently none. Highest-value targets: the Zod mappers/validation, `verifyCredentials`, and one Playwright E2E for `login → create post → see it live`.

MEDIUM IMPACTMEDIUM EFFORT

TIER 2 Reach & SEO

cheap, compounding

JSON-LD on detail pages

Person/Service schema exists globally; adding BlogPosting + CreativeWork schema to blog/project detail pages unlocks rich search results.

HIGH IMPACT

LOW EFFORT

RSS feed + per-post dynamic OG images

The two deferred extras. Cover images already exist to reuse for share previews.

MEDIUM IMPACT

LOW EFFORT

Internationalisation — EN / FR / AR

The single biggest audience lever for an Algiers-based engineer. Pairs perfectly with Gemini: a "Translate" button in the admin to auto-populate FR/AR from the English source.

HIGH IMPACT

HIGH EFFORT

TIER 3 Admin polish & AI depth

Draft preview

A tokenized link to view a draft item before publishing it.

MEDIUM IMPACT

MEDIUM EFFORT

Project gallery multi-upload

ImageField handles a single image, but gallery is an array — there's currently no UI to manage multiple gallery images.

MEDIUM IMPACT

MEDIUM EFFORT

More AI assistance

One-click "generate whole post from a title"; AI for the project Results JSON; alt-text generation (Gemini vision on uploads); and SEO meta-description generation.

MEDIUM IMPACT

MEDIUM EFFORT

TIER 4 Growth signals & performance

Analytics + lead capture

Plausible or Vercel Analytics, plus a newsletter signup (via existing Resend) or a "most viewed" counter to surface popular work.

MEDIUM IMPACT

LOW EFFORT

next/image for public images

The public pages use plain `<img>`. Switching to `next/image` with the Cloudinary loader (already configured) gives automatic responsive sizes and lazy loading.

MEDIUM IMPACT

LOW EFFORT

If you do only three

1. **ISR revalidation** — fixes a likely bug where admin edits don't show on the live site.
2. **Login rate limiting** — closes a real brute-force hole on the admin.
3. **i18n + AI translate** — roughly doubles your addressable audience (EN/FR/AR).

Already shipped

- ✓ Projects / Blog / Services list + detail pages
- ✓ Zod validation at the data boundary
- ✓ Admin CRUD for all content types
- ✓ Gemini writing assistant in admin forms
- ✓ SVG cover images + sitemap
- ✓ Postgres + Prisma with mock fallback
- ✓ Admin auth (JWT sessions, middleware guard)
- ✓ Cloudinary uploads → auto-resized WebP
- ✓ Related items + loading / error states
- ✓ Person / Service JSON-LD (global)
